Key Insights

Evidence from the Customer Behaviour dashboard: what the numbers say and why it matters

Revenue	Orders	Avg order value	Est. gross profit	Avg rating
₺4.92M	**5,000**	**₺983**	**₺1.36M**	**3.90 / 5**

Gross margin (est.)	Returning customers	Email open rate	Loyalty members	Satisfaction
27.7%	**60%**	**57%**	**37%**	**3.72 / 5**

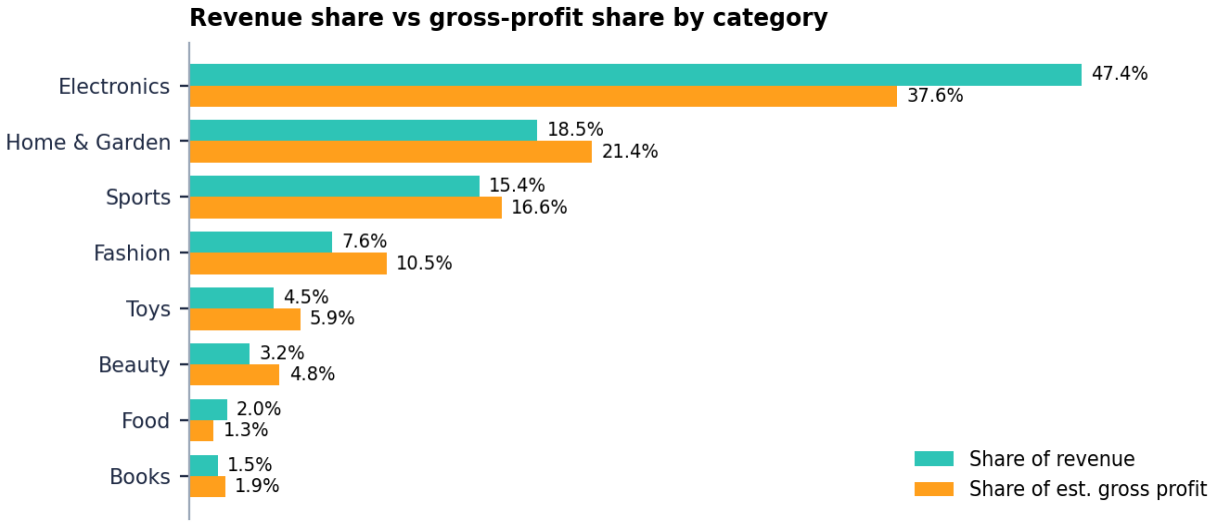

Top five takeaways

- **Growth is basket-led.** Like-for-like Q1 revenue is up 7% (12% per day) because average order value rose 10%, while orders fell 3%.
- **Concentration risk.** Electronics is 47% of revenue and Istanbul 27%; the top three cities are 52%.
- **Profit mix lags revenue mix.** Electronics earns 47% of revenue but only 38% of estimated gross profit.
- **Quality gap.** All 8 categories are below target rating; Food (−0.67), Beauty (−0.49) and Sports (−0.40) are furthest away.
- **Retention tools are not paying off yet.** Loyalty members spend 12% less per order, 35% of members hold zero points, and discounts do not raise basket size.

A. Executive Overview – performance

1 **Revenue ₺4.92M from 5,000 orders; AOV ₺983; estimated gross profit ₺1.36M (27.7%).**
Each customer appears once in the data, so orders and customers are equal (5,000).
Why it matters: Sets the baseline for every target in the recommendations.

2 **Electronics is 47.4% of revenue (₺2.33M) but only 37.6% of gross profit.**
Its margin is 22%, second lowest after Food (18%). Home & Garden (18.5% of revenue, 21.4% of profit) and Fashion (7.6% vs 10.5%) over-deliver on profit.
Why it matters: Revenue growth in Electronics adds less profit than the same growth in other categories.

3 **Order volume is flat across categories (610–667 orders each); revenue differs because of price.**

Average order value: Electronics ₺3,732, Home & Garden ₺1,463, Sports ₺1,131, Fashion ₺603, Toys ₺366, Beauty ₺252, Food ₺155, Books ₺118.

Why it matters: Customers buy every category at the same rate, so the lever is basket value and cross-selling, not footfall.

4 **Istanbul gives 27.1% of revenue; the top three cities give 52.1%.**

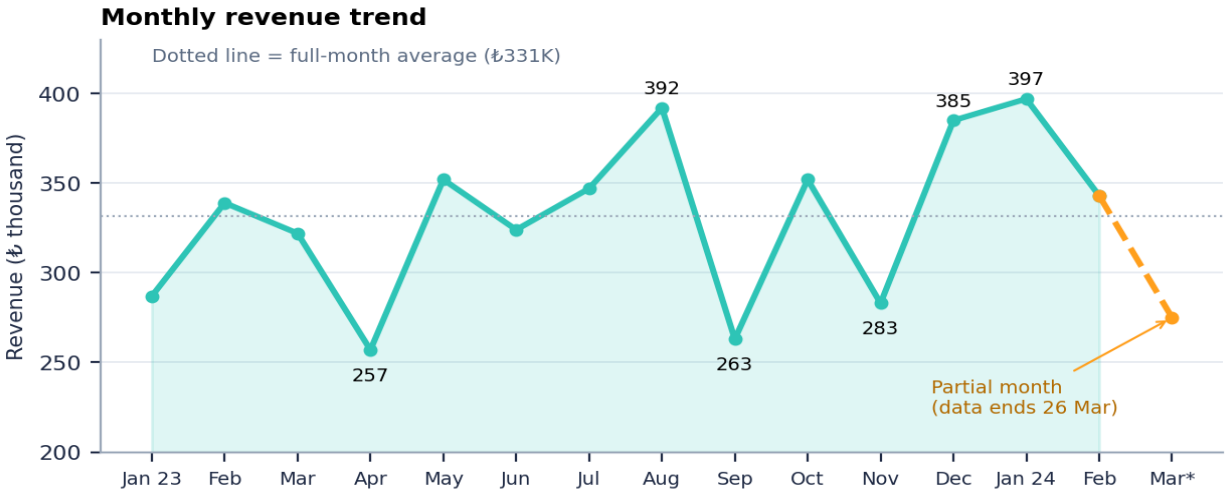

Kayseri (AOV ₺1,215), Adana (₺1,130) and Konya (₺1,088) beat Istanbul (₺1,039) on order value but hold 6–9% of revenue each. Eskisehir is the smallest (3.6%, rating 3.83). Ankara is the second-largest city but has a below-average AOV of ₺895.

Why it matters: High-spending smaller cities are the clearest geographic growth opportunity.

5 **Like-for-like growth is positive: Q1 2024 (86 days) vs Q1 2023 (90 days) revenue +7.1%, +12.1% per day.**

AOV ₺1,064 vs ₺968 (+10.0%); orders 953 vs 979 (−2.7%), +1.9% per day.

Why it matters: The business is earning more per order. Order count is flat, so acquisition has not grown.

6 **Monthly revenue ranges from ₺257K (Apr 2023) to ₺397K (Jan 2024); full-month average ₺331K.**
Peaks: Aug 2023, Dec 2023, Jan 2024. Lows: Apr, Sep and Nov 2023. March 2024 (₺275K) is a partial month, so the dip is not a real decline.
Why it matters: Plan campaigns around the troughs. With only 15 months of data, seasonality is indicative, not proven.

7 **Card payments are 66% of orders (credit 40.2%, debit 25.3%); digital wallet 19.3%; bank transfer 10.2%; cash on delivery 5.0%.**
Bank transfer has the highest AOV (₺1,080); cash on delivery has the lowest share and ₺945 AOV.
Why it matters: Digital payment is already the norm, so cash handling is a small cost area.

B. Customer Insights – who buys

8 **Ages 25–44 generate 59.4% of revenue (25–34: 29.2%, 35–44: 30.2%).**
18–24 adds 20.4%, 45–54 adds 15.2%, 55+ only 4.9% (236 orders) but with the highest AOV (₺1,028).
Why it matters: The core audience is clear; the 55+ group is small but valuable per order.

9 **Mobile delivers 55.9% of orders and 57.2% of revenue, with AOV ₺1,006.**
Desktop: 34.2% of orders, AOV ₺964. Tablet: 9.9% of orders, AOV ₺921 (lowest).
Why it matters: Mobile experience is the main revenue touchpoint; tablet shoppers under-spend.

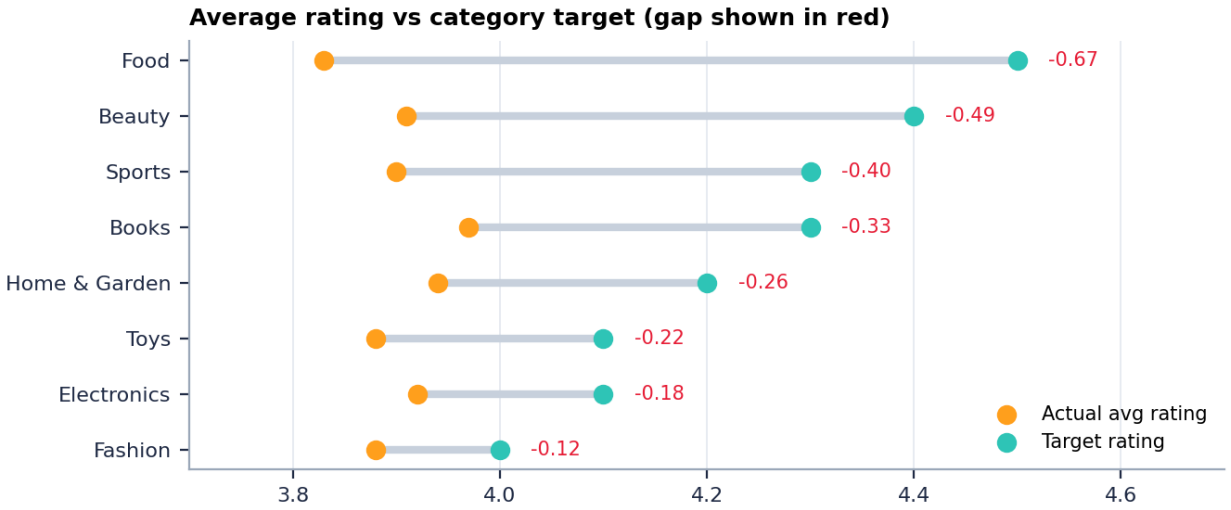

10 **Gender is balanced: female 50.3% of revenue, male 48.4%, Other 1.2%.**
The “Other” group (73 orders) has the lowest AOV (₺829).
Why it matters: No gender-targeting case; the “Other” sample is too small for firm conclusions.

11 **Returning customers (59.8% of orders) behave like new customers.**
AOV ₺986 vs ₺979; rating 3.90 vs 3.91.
Why it matters: Being a returning customer is not yet producing higher value or satisfaction.

12 **Electronics leads in every age band (45.1%–48.8% of that band’s revenue).**
Heatmap: Electronics ₺714K in 35–44 and ₺701K in 25–34, the two largest cells.
Why it matters: Preferences are consistent across ages; segment by value and channel, not by product interest.

C. Product, Profit & Delivery – what pays

13 **All eight categories miss their target rating (overall 3.90).**
Gaps: Food −0.67, Beauty −0.49, Sports −0.40, Books −0.33, Home & Garden −0.26, Toys −0.22, Electronics −0.18, Fashion −0.12.
Why it matters: Quality or expectation issues are universal, and are worst where targets are highest.

14 **High-margin categories are small: Beauty (42%), Fashion (38%) and Toys (36%) are only 15.3% of revenue but 21.2% of gross profit.**
Books (35%) adds a further 1.5% of revenue.
Why it matters: Even small mix shifts toward these categories lift overall margin.

15 **Discounts do not raise basket size.**
30.5% of orders carry a discount; total ₺124K (2.5% of gross sales). AOV is ₺981 with discount and ₺984 without; rating 3.93 vs 3.89.
Why it matters: Current discounting costs revenue without a visible basket-value return.

16 **Delivery is slow for a third of orders.**
Average 6.5 days; only 19.3% arrive in 1–3 days, 48.7% in 4–7 days and 32.0% in 8+ days (maximum 25). Fast deliveries rate 3.95 vs 3.89–3.90; correlation between delivery days and rating is −0.01.
Why it matters: Speed has a small effect on ratings; do not expect delivery alone to close the quality gap.

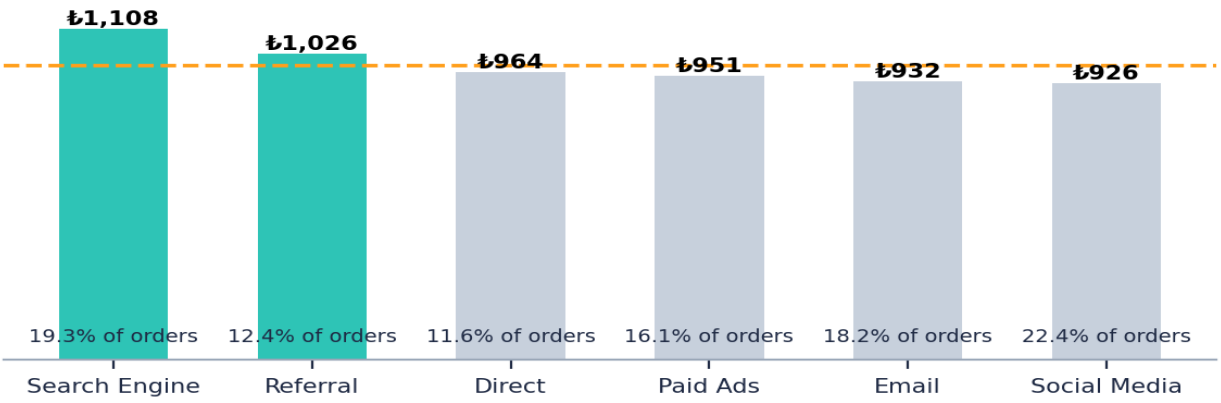

17 **Small baskets rarely reach free shipping, and they hardly matter for revenue.**
760 orders (15.2%) fall below their category's free-shipping threshold (₺35–₺150); together they give ₺49K (1.0% of revenue), AOV ₺65.
Why it matters: Free-shipping nudges can lift low-value baskets cheaply.

D. Marketing & Engagement – how customers arrive and stay

18 **Search Engine is the most valuable channel; Social Media is the largest but least valuable.**
Search Engine: 21.8% of revenue from 19.3% of orders, AOV ₺1,108. Social Media: 22.4% of orders, AOV ₺926, satisfaction 3.66 (lowest). Referral AOV ₺1,026 but the lowest rating (3.83).
Why it matters: Channel spend should follow value per order, not order count.

Average order value by marketing channel

Dashed line = overall AOV (₺983); teal bars are above it

19 **Loyalty membership is large but inactive and not lifting spend.**
37.2% of customers are members, but 660 members (35%) hold zero points. Members' AOV is ₺908 vs ₺1,027 for non-members (−11.6%); satisfaction is the same (3.72 vs 3.73).
Why it matters: The programme does not currently change behaviour; it needs redesign, not promotion.

20 **Email works modestly and contact data has gaps.**
57.4% open email; openers spend ₺1,000 per order vs ₺961 (+4.1%). Email is the preferred contact for 34.5% of orders (AOV ₺1,038). 20% have no contact preference (AOV ₺911).
Why it matters: Email is the best owned channel; the missing preferences limit personalisation.

21 **Cart abandonment and satisfaction need attention.**
Average 1.39 abandoned carts per customer (6,940 total); highest for Paid Ads (1.49) and Referral (1.48), lowest for Social Media (1.32). Satisfaction averages 3.72/5 and 15.7% score 1–2.
Why it matters: Abandoned carts are the largest identifiable pool of recoverable demand.

Reading note. Ratings, satisfaction, delivery time, cart abandonment and order value show almost no statistical relationship in this dataset (|r| < 0.02). The insights above are descriptive patterns from the data, and the estimated gross profit uses catalogue margins rather than actual costs.
