Recommended Solutions

Actions to grow value, protect profit and improve customer experience

How to read this document

Each recommendation links to evidence in the dashboard (see the Key Insights document), states a concrete action, and names the KPI that the Power BI report can track. Impact and effort ratings are the analyst's judgement. Money figures marked **illustrative** are simple arithmetic on this dataset, not forecasts.

Priority summary

#	Recommendation	Key evidence	Impact	Effort	Timing
1	Cut blanket discounts; use threshold and targeted offers	Discounts cost ₺124K with no AOV lift (₺981 vs ₺984)	Medium	Low	0–30 days
2	Recover abandoned carts with email / app reminders	6,940 abandoned carts; email is the top contact choice	High	Low	0–30 days
3	Nudge small baskets over the free-shipping threshold	760 orders (15%) below threshold earn 1% of revenue	Low–Med	Low	0–30 days
4	Close the rating gap with a category quality review	All 8 categories below target; Food −0.67, Beauty −0.49	High	Medium	30–60 days
5	Rebalance marketing toward high-value channels	Search AOV ₺1,108 vs Social ₺926	High	Medium	30–60 days
6	Rebuild the loyalty programme	35% of members at zero points; members spend 12% less	High	Medium	30–60 days
7	Lift gross profit through category mix and bundles	Electronics 47% of revenue, 38% of profit	High	Medium	60–90 days
8	Speed up delivery where it matters most	32% of orders take 8+ days; 19% in ≤3 days	Medium	High	60–90 days
9	Grow high-AOV cities and protect the core audience	Istanbul 27%; Kayseri/Adana/Konya AOV above Istanbul	Medium	Medium	60–90 days
10	Improve mobile/tablet and payment experience	Mobile 57% of revenue; tablet AOV ₺921	Medium	Medium	60–90 days
11	Fix data capture and reporting	20% contact method blank; one order per customer	Enabler	Low	0–30 days

Detailed recommendations

1. Make discounts earn their cost

Problem	Discounts reduce revenue without raising basket size.
Evidence	30.5% of orders are discounted; total ₺124K (2.5% of gross sales). Average order value is ₺981 with a discount and ₺984 without. Rating is 3.93 vs 3.89.
Actions	• Replace blanket discounts with threshold offers (e.g. “spend ₺X, get Y off”) and offers on slow categories only. • Run an A/B test: keep discounts for half of a segment, remove them for the other half, compare conversion and AOV for 4–6 weeks. • Exclude Electronics from percentage discounts (low 22% margin, high ticket price).
KPI to track	Discount % of gross sales (now 2.5%); AOV with vs without discount; margin %.
Suggested owner	Marketing lead with Category Managers.
Note	Illustrative upper bound: if half of the ₺124K discount spend were removed with no loss of orders, revenue would be about ₺62K (1.3%) higher. Real impact depends on how many orders the discounts currently win.

2. Recover abandoned carts

Problem	Customers abandon carts repeatedly and nothing in the report shows recovery.
Evidence	1.39 abandoned carts per customer on average; 6,940 in total. Highest for Paid Ads (1.49) and Referral (1.48). Email is the preferred contact for 34.5% of orders, app notification 24.8%, SMS 20.7%.
Actions	• Automate a 3-step reminder (1 hour, 24 hours, 72 hours) via the customer’s preferred channel. • Add a small incentive (free shipping, not a price cut) only on the last reminder. • Review the landing pages and checkout for Paid Ads and Referral traffic first.
KPI to track	Avg cart abandonment per customer (now 1.39, suggested target ≤1.2); recovery rate; recovered revenue.
Suggested owner	CRM / e-commerce manager.
Note	Illustrative upper bound: converting 5% of 6,940 abandoned carts at the average order value of ₺983 would add about ₺341K (7% of revenue). Cart values are not in the data, so treat this as a sizing guide only.

3. Nudge small baskets to free shipping

Problem	Some orders fall below the free-shipping threshold and contribute almost nothing.
Evidence	760 orders (15.2%) are below their category threshold (₺35–₺150); they total ₺49K (1.0% of revenue) with an AOV of ₺65.
Actions	• Show “Add ₺X more for free shipping” in the cart and on product pages. • Suggest low-price add-ons (Books, Food, Beauty minis) that cross the threshold.
KPI to track	Share of orders below threshold (now 15.2%); AOV of small baskets.
Suggested owner	E-commerce product owner.

4. Close the rating gap with a category quality review

Problem	Every category is below its target rating.
Evidence	Overall rating 3.90. Gaps to target: Food −0.67, Beauty −0.49, Sports −0.40, Books −0.33, Home & Garden −0.26, Toys −0.22, Electronics −0.18, Fashion −0.12. Price and delivery time have almost no link to rating ($\|r\| < 0.02$), so the causes are likely product quality, expectations or service.
Actions	• Start with Food, Beauty and Sports: read low-rating reviews and returns reasons, and tag root causes. • Introduce supplier scorecards and a minimum rating threshold for new products. • Check whether targets are realistic: Food's 4.5 target is the highest while its rating is the lowest. • Track 1–2 star ratings (13.3% of orders) as a separate KPI.
KPI to track	Avg rating vs target by category (dashboard table); share of 1–2 star ratings.
Suggested owner	Category Managers: Manager C (Food), Manager D (Beauty, Books, Fashion, Home & Garden), Manager A (Electronics, Sports), Manager B (Toys).

5. Rebalance marketing toward high-value channels

Problem	The biggest channel brings the smallest orders.
Evidence	Search Engine: 21.8% of revenue from 19.3% of orders (AOV ₺1,108). Social Media: 22.4% of orders but AOV ₺926 and the lowest satisfaction (3.66). Referral has a high AOV (₺1,026) but the lowest rating (3.83). Email: 18.2% of orders, AOV ₺932.
Actions	• Shift part of the budget toward Search Engine and test incremental spend with a revenue-per-order target. • Redesign Social Media campaigns to promote bundles and mid-price categories, and add a quality-of-traffic check. • Investigate Referral fulfilment and partner expectations to explain the low rating. • Report channel results by revenue and AOV, not only by order count.
KPI to track	AOV and revenue share by channel; satisfaction by channel.
Suggested owner	Digital marketing lead.
Note	Illustrative: lifting Social Media AOV from ₺926 to the overall ₺983 on its 1,122 orders would add about ₺64K (1.3% of revenue).

6. Rebuild the loyalty programme

Problem	Loyalty members are not more valuable and many are inactive.
Evidence	37.2% of customers are members, but 660 of 1,862 members (35%) hold zero points. Members' AOV is ₺908 vs ₺1,027 for non-members (−11.6%); satisfaction is 3.72 vs 3.73. 76% of all customers have no points.
Actions	• Run a re-activation campaign for the 660 zero-point members (bonus points on the next order). • Reward basket size: points multipliers above a spend level, rather than flat points. • Offer tier benefits that matter (free shipping, early access) for Silver and Gold. • Invite non-members at checkout (62.8% of customers).
KPI to track	Share of members with points (now 64.6%, suggested target 80%); member AOV vs non-member AOV.
Suggested owner	Loyalty / CRM manager.

7. Lift gross profit through category mix and bundles

Problem	Revenue is concentrated in a low-margin category.
Evidence	Electronics: 47.4% of revenue, 37.6% of gross profit (22% margin). Beauty, Fashion and Toys have margins of 36–42% but are only 15.3% of revenue (21.2% of profit). Order counts are similar across categories, so growth must come from basket value.
Actions	• Create bundles and “complete the look” offers pairing Electronics buyers with accessories, Fashion and Beauty items. • Add post-purchase recommendations from high-margin categories. • Promote Home & Garden and Sports (mid-ticket, 30–32% margin) as the second growth engine. • Track margin by category monthly, next to revenue.
KPI to track	Gross margin % (now 27.7%, suggested target 29%); Electronics revenue share (now 47.4%, suggested ≤45%).
Suggested owner	Category Managers and merchandising.

8. Speed up delivery where it matters most

Problem	A third of orders are slow, although delivery has only a small effect on ratings.
Evidence	Average delivery 6.5 days; 19.3% in 1–3 days, 48.7% in 4–7 days, 32.0% in 8+ days (maximum 25 days). Fast deliveries score 3.95 vs about 3.89.
Actions	• Prioritise Istanbul, Ankara and Izmir (52% of revenue) for faster options. • Set clear delivery promises and notify customers on delays; cap deliveries above 14 days. • Measure carrier performance by city and category.
KPI to track	Share of orders delivered in 8+ days (now 32%, suggested target <20%).
Suggested owner	Operations / logistics lead.
Note	Because the rating effect is small, weigh the cost of faster delivery against the benefit before investing heavily.

9. Grow high-AOV cities and protect the core audience

Problem	Sales depend on a few cities and one age band.
Evidence	Istanbul 27.1% of revenue; top three cities 52.1%. Kayseri (AOV ₺1,215), Adana (₺1,130) and Konya (₺1,088) exceed Istanbul’s AOV (₺1,039). Ankara is large but below average (₺895). Ages 25–44 give 59% of revenue; 55+ is only 5% but has the highest AOV (₺1,028).
Actions	• Run local acquisition campaigns in Kayseri, Adana and Konya and measure revenue per order. • Add upsell offers in Ankara to lift AOV. • Keep the 25–44 audience engaged with mobile-first journeys; test an easy phone/SMS-friendly journey for the 55+ group.
KPI to track	Revenue share of top 3 cities (now 52%); revenue and orders in target cities.
Suggested owner	Regional marketing manager.

10. Improve mobile, tablet and payment experience

Problem	Mobile carries most revenue, tablet underperforms.
Evidence	Mobile: 55.9% of orders, AOV ₺1,006. Tablet: 9.9% of orders, AOV ₺921. Bank transfer has the highest AOV (₺1,080); cash on delivery is only 5% of orders.
Actions	• Speed-test and simplify mobile checkout; add wallet and saved-card options. • Review the tablet layout for product pages and carts. • Offer bank transfer or instalments on high-value baskets.
KPI to track	Conversion and AOV by device; payment mix.
Suggested owner	Product / UX owner.

11. Fix data capture and strengthen reporting

Problem	Some questions cannot be answered with the current data.
Evidence	20% of customers have no contact preference. Every customer has one order, so repeat purchase and lifetime value cannot be measured. There are no cost, return or refund fields, so profit is estimated from catalogue margins.
Actions	• Capture contact preference at checkout and in the account profile. • Keep full order history per customer and add return, refund and cost fields. • Set real targets for the gauges (email open rate, loyalty share, satisfaction) with business owners. • Refresh the dashboard with full months and compare matched periods.
KPI to track	Share of customers with contact preference (now 80%); data completeness checks.
Suggested owner	BI / data team.

KPI scorecard (suggested targets)

Baselines come from the current dashboard. Targets are suggestions for discussion and should be validated with business owners.

KPI	Baseline	Suggested target	Linked recommendation
Average order value	₺983	₺1,030 (+5%)	2, 3, 5, 7
Gross margin (estimated)	27.7%	29%	1, 7
Electronics share of revenue	47.4%	≤45%	7, 9
Average rating	3.90	4.10	4
Cart abandonment per customer	1.39	≤1.2	2
Loyalty members with points	64.6%	80%	6
Orders delivered in 8+ days	32.0%	<20%	8
Email open rate	57.4%	65%	2, 11
Customers with contact preference	80%	95%	11

30 / 60 / 90 day roadmap

Phase	Focus	Actions
0–30 days Quick wins	Stop leakage, start recovery	Discount rules and A/B test (1); abandoned-cart reminders (2); free-shipping nudges (3); capture contact preference and add data fields (11)
30–60 days Fix the base	Quality, channels, loyalty	Category quality review (4); channel budget tests (5); re-activate zero-point members and redesign tiers (6)
60–90 days Scale	Mix, speed, reach	Bundles and cross-sell (7); delivery SLAs (8); city and audience campaigns (9); mobile and tablet UX (10); dashboard v2 with new KPIs

Dashboard improvements to support these actions

- Add a **matched-period comparison** (same days last year) so partial months are not misread.
- Add **cards for gross margin %, abandoned carts per customer and share of 8+ day deliveries** to the relevant pages.
- Add a **drill-through page by category** showing rating, margin and discount rate together.
- Show **channel revenue, AOV and satisfaction** in one table with conditional formatting.
- Label gauge targets as “analyst benchmark” until business owners confirm them.

Risks and caveats

- The dataset covers 15 months and one order per customer, so seasonality and customer lifetime value cannot be proven.
- Gross profit is estimated from catalogue margins; actual profit may differ once costs, returns and shipping are included.
- Relationships between ratings, satisfaction, delivery time and cart abandonment are weak in this data, so cause-and-effect should be confirmed through tests (for example A/B tests) before large investments.
- Illustrative amounts are sizing guides based on simple arithmetic, not forecasts.
